

IT Governance & Contract Management

Case Study

Luis Eduardo Moraes, MPM®

Executive Summary

This case study presents a structured governance model for managing contracts and vendors, focusing on financial control, SLA performance, and risk mitigation.

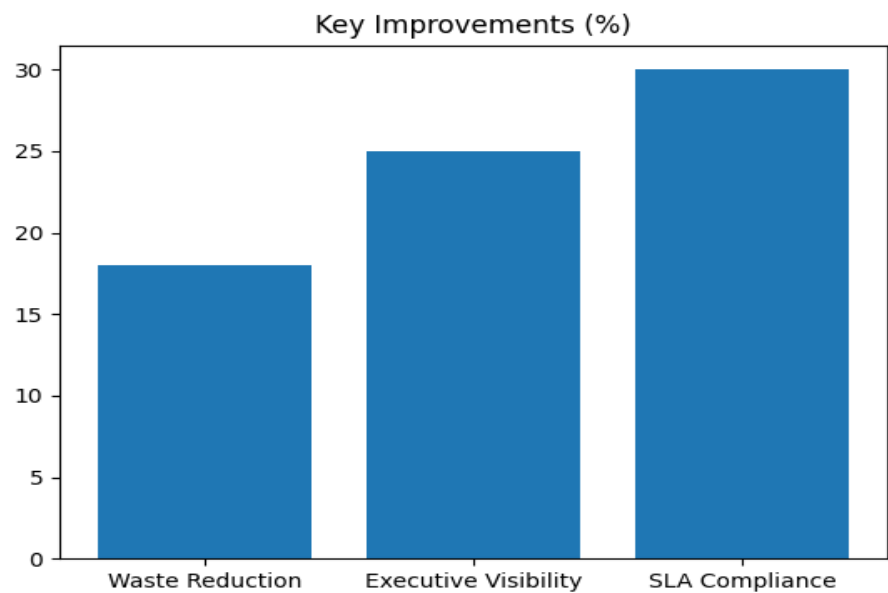

Problem

Decentralized contract management environment leading to financial risks, lack of SLA visibility, and governance inefficiencies.

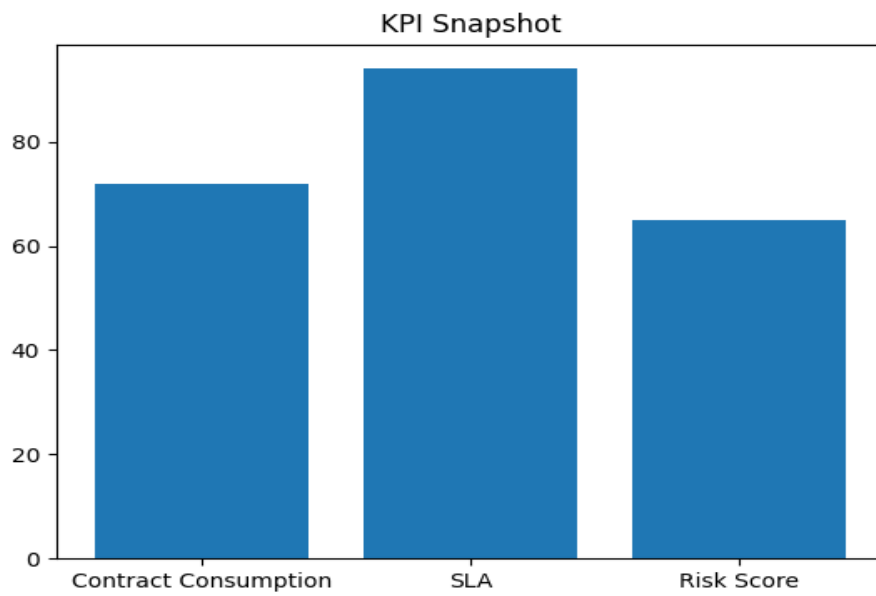

Solution

Implementation of a governance model based on financial KPIs, SLA monitoring, vendor risk classification, and contract lifecycle control.

Key Results

KPI Dashboard Snapshot

Conclusion

A structured governance approach enhances financial control, improves SLA performance, and supports data-driven decision-making.

Power BI Dashboard: This case can be integrated with a Power BI dashboard to provide real-time insights into contracts, vendors, and KPIs.
